

Rail Tie-Down Anchors - Installation Guide

Toyota Tundra & Tacoma

1. Remove plastic end caps from rails.
2. Loosely assemble Tie-Down Anchor to threaded plate using provided bolts. Position threaded plate with step facing the Tie-Down Anchor.
3. Slide assembly into end of rail. Align step on threaded plate with notch inside rail.
4. Tighten bolts using 6mm hex wrench and reinstall end caps.

Jeep Gladiator

1. Drop threaded plate into rail slot with step facing you. Align step on threaded plate with notch inside rail.
2. Assemble Tie-Down Anchor to threaded plate using provided bolts.
3. Tighten bolts using 6mm hex wrench.

Helpful Tips: If you can't slide the Tie-Down Anchor in from the end of the rail, remove the rail using a Torx bit.

Never exceed the load capacity of your vehicle.

Use multiple straps to share the load and provide redundancy.

Check bolt tightness before attaching straps to Tie-Down Anchors.
